General Information

Technical Information

As most end-users use quick couplings, SATA spray guns are generally supplied with air inlet G 1/4" male thread without hose screws.

Terms of Delivery

All indicated prices are ex works. They exclude packaging, freight, shipment and insurance cost. The general terms and conditions of delivery and payment apply exclusively. They can be viewed at www.sata.com/LZB. We object to any other purchasing conditions.

Prices

All prices in this list are recommended prices only and will be valid for the indicated period of time. All prices are quoted exclusive of VAT. We reserve the right to change prices at any time and without prior notification.

Small Order Policy

Small orders below a value agreed with the customer (list prices excl. VAT) will be invoiced at gross list prices without

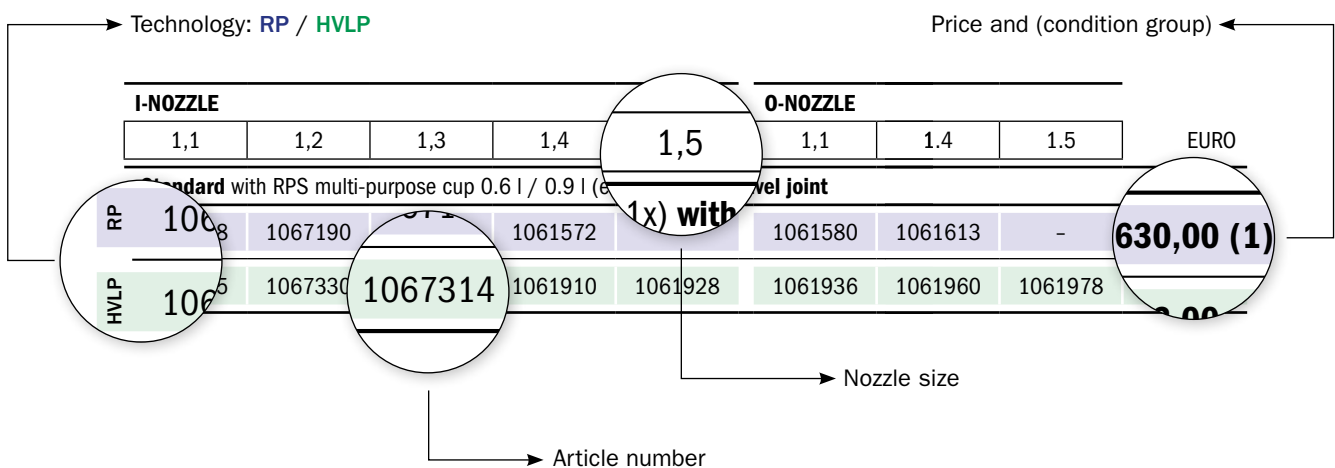

discount. In case that nothing has been stipulated with the customer, a minimum order value of 2.500.00 € applies.

Exchange/Return

We only accept return and exchange of products upon prior written authorisation by SATA. Goods for refund must be returned in unused, pristine condition and in their original packaging. Outdated, used or damaged parts will not be accepted for return. For the return of products which have been incorrectly ordered, or for other reasons which we cannot be held responsible for, a charge of 20 % of the net purchase price will be levied to cover inspection and administrative costs. A handling charge of minimum 60.00 € will apply in any case for each transaction.

Errors, technical modifications and printing errors reserved.

Structure of the Price Sheets

Product classification in condition groups (CG)

- (0) Special items
- (1) Spray guns, filtration technology, blow guns and underbody protection spray guns
- (2) Breathing Protection
- (3) Components, accessories and spare parts for articles belonging to group CG 1, e.g. nozzle sets, gravity flow cups, etc
- (4) Components, accessories and spare parts for articles belonging to groups CG 2 and CG 5
- (5) Pumps, pressure pots, rustproofing equipment, automatic spray guns, dry-blowing systems, cleaning devices and dispensing systems
- (6) Other devices, service

ACCESSORIES
MERCHANDISE ITEMS

Robust air cap made of chrome-plated brass with **QC™** air cap thread for quick change with one turn only.
Air cap ring:
green = HVLP technology
blue = RP technology.

Fluid tip and paint needle made of corrosion-resistant stainless steel.

Material passage (red)

Air passage (blue)

Fluid tip seal ensuring minimal cleaning effort and safe colour change.

Low maintenance, self-adjusting sealings at air piston and paint needle.

Gun trigger with paint needle guard ensuring increased life time of the paint needle packing.

Option: Digital pressure display for exact pressure adjustment, perfect colour match and reproducibility.

CCS™ – Color Code System. For the convenient identification of your spray gun.

QCC® – Quick Cup Connector. Bayonet cup connection. Ensures quick and clean cup change as well as easy cleaning.

Gun suspension hook for convenient storage.

Control elements can be perfectly adjusted even wearing gloves. Improved material flow control.

Air micrometer for the adjustment of the atomisation air. Highest precision with digital pressure gauge (optional).

Spray fan control allowing fine adjustment with a half turn only.

Ergonomically shaped gun handle.

Easy to clean, corrosion-resistant anodised surface.

Air connection 1/4" male thread with swivel joint.

1+2=3 PREMIUM WARRANTY

Warranty: Talking quality is not enough – we guarantee it: for three years with registration!

The revolutionary nozzle system

State-of-the-art paint systems and the latest application recommendations open up new possibilities, but also pose new challenges for professional painters. The SATAjet X 5500 featuring the new X-nozzle system now defines a wholly new application standard for the future.

The concept of this nozzle system is easy and straightforward to understand: Both proven application technologies – HVLP and RP – remain available, but now each of them with the additional choice between "I" and "O"-nozzle sets. In line with the increasing nozzle sizes within each of the respective technology (HVLP / RP), the material flow rate increases too with constant increments – which means that the spray fan size and width remain unchanged across the entire nozzle spectrum. In essence, end-users can now rely on a transparent and consistent system which offers them clear and well-structured application options.

The "I"-nozzles produce a parallel spray fan pattern with a minimal dry zone and a drier centre which is ideal for painters preferring a **reduced application speed** and maximum application control during the painting process. The **film build per coat** in comparison to an "O"-nozzle of the same size is **slightly reduced**.

- Parallel spray fan with minimal dry zone
- Improved control during application
- Reduced film build per coat compared to the nozzle set currently in use or the "O"-nozzle

"O"-nozzles do have an oval-shaped spray fan pattern with a larger dry zone and a wet core to accommodate **increased application speed** at the expense of slightly less application control during the painting process. The **film build per coat** in comparison to an "I"-nozzle is **slightly higher**.

- Oval-shaped spray fan with larger dry zone
- Wet core for increased application speed
- Film build per coat slightly higher compared to the "I"-nozzle

SATAjet® X 5500 HVLP

SATAjet® X 5500 RP® Digital

PRODUCT BENEFITS

- Revolutionary: The X-nozzles are taking atomisation to a whole new level
- Noticeably quieter: Whispering nozzle™ due to optimised air flow geometry, reduced noise level in the relevant sound frequency ranges
- Individual: Matches any application requirement, such as specific characteristics of the paint system, climatic conditions and application method (application speed/application control)
- Precise: Optimised material distribution for enhanced spraying uniformity and atomisation with both spray fan shapes
- Low maintenance: No air distribution insert required, thus also ensuring a much easier and faster cleaning process
- Consistent: Constant fan size across the entire nozzle spectrum (within each respective atomisation technology) with linear increases of the material flow rate
- Efficient: The optimised atomisation concept enables to realise considerable material savings using the same application method as before

Spray fan comparison

SATAminijet 4400 B HVLP

Standard nozzle / SR nozzle

SATAminijet 4400 B RP

Standard nozzle / SR nozzle

SR-nozzles especially for spot repair applications

- Lower risk of creating bright edges ("halos")
- Allows application of very thin layers of paint

29280	Cleaning brush (packing unit 10 pieces) for suction pipe of suction cup spray guns	23.80 (3)	

▶ Please also observe the SATA cleaning devices on page 132.

Disassembly of nozzle set

1 First remove paint needle.

2 Followed by the cap.

3 And finally, unscrew fluid tip with the ring spanner integrated in the universal spanner.

Cleaning and drying

1 Clean the material passage

2 Clean the spray gun body

3 Dry with blow gun

When cleaning the spray gun manually, please ensure not to use brushes made of metal wires which could possibly damage the spray gun. Furthermore, please make sure that no cleaning fluid ends up in the air passages of the spray gun body.

Cleaning of the nozzle set

When cleaning the nozzle components, please make sure that metal parts of brushes do not damage the nozzle set. Ideally, please use specially designed SATA cleaning brushes and SATA nozzle cleaning needles to ensure optimum cleaning and maintenance of the nozzle set.

Please watch our video at www.sata.com/TV concerning "Cleaning and Maintenance of Spray Guns". Or simply order the cleaning brochure (Art. No. 158162) or the cleaning poster (Art. No. 168070) free of charge!
www.sata.com/firstaid

Assembly and maintenance

1 Assembly of the fluid tip

2 Tighten fluid tip by hand using the universal spanner.

3 Assembly of the air cap

4 Grease paint needle around the needle packing area

5 Insert paint needle

6 Grease and insert paint needle spring

7 Grease thread of material flow control screw

8 Install material flow control screw

9 Grease visible part of air piston rod

SATA[®] Loyalty Program

coins & more

With the SATA Loyalty Program, SATA rewards loyal customers of certain products (currently all RPS cup systems) with loyalty coins, which can then be converted into high-quality rewards.

Allowed to participate are buyers of premium products or employees of buying companies based in a country where the program is offered, with the agreement of the company, in accordance with the conditions set out in the conditions of participation. Points are collected by scanning a QR code applied to certain eligible products.

On the outside of each RPS carton there is a booklet in which the coin value can be scanned from the QR code. Download the SATA Loyalty App, fill in the user information, scan and collect the SATA Coins. You can then exchange the coins for attractive rewards.

- 1. Download App & register**
- 2. Scan QR code & collect coins**
- 3. Convert into rewards**

Collect coins with every cup!

Purchasing a SATA RPS box of **40 cups** (SATA RPS 0.3 I, SATA RPS 0.9I) means **40 coins**, purchasing a SATA RPS box of **60 cups** (SATA RPS 0.3 I minijet, SATA RPS 0.6 I) means **60 coins** and purchasing a box of **100 cups** (SATA RPS 0.3 I XL) means **100 coins**.

Breathing Protection

SPRAY GUNS

CUP SYSTEMS

BREATHING PROTECTION

FILTER TECHNOLOGY

ACCESSORIES

MERCHANDISE ITEMS

Hood cloth
Breathable, solvent-resistant, lint-free and flame retardant. Quick exchange due to velcro attachment system.

Comfort head band
To ensure highest hygiene standards. Made of microfibre velour, dermatologically tested; can be exchanged within a few seconds only; includes foam insert for enhanced wearer comfort.

Hood
With rigid skull cover providing impact protection whilst working in confined areas.

Headband
Can be adjusted at 4 different points ensuring perfect fit.

SATA CCS discs
Allows the convenient individual identification to avoid confusion; available in 4 colours.

Locking/pivot control
Allows easy visor location.

Visor
With large field of vision

Facial seals
Follows facial contours ensuring optimum seal and comfort. Low reflection due to dark colour.

Plug-in diffuser
optional accessory – to avoid uncomfortable air flow.

Breathing air hose
for fresh air supply. Hose guide on the rear for maximum comfort.

Acoustic warning signal
Instant indication of insufficient air supply.

Diffusor block
Breathing air distribution reduces the noise level to 64 dB(A) at 2.5 bar inlet pressure.

Respirator type	Fields of application/function

SATA® filter

524™/544™/564™/584™

Technical data:

Air inlet: G 1/2" female thread

Air outlet: 1/4" male thread

Max. inlet operating pressure: 15,0 bar

Max. outlet operating pressure: 15,0 bar

Air flow at 6.0 bar: approx. 3.800 NI/min

Max. ambient temperature: 120 °C

Max. ambient temperature with activated charcoal: 60°C

**Combi filter**

Euro

1101667
SATA pressure reducer with gauge 0-10 bar (0-145 psi), air outlet G 1/2" (female thread)

416.00**(1)**

1101659
SATA filter 524 single-stage sinter filter, pressure regulator, outlet module (2 x 1/4" male thread)

633.00**(1)**

1101641
SATA filter 524 L single-stage sinter filter, pressure regulator, for pipeline installation (G 1/2" female thread)
